German climate leadership?
Open letter from global civil society to German coalition negotiators

Dear Chancellor Merkel,

As representatives of global civil society, we are writing this letter from Warsaw today to urge you to show true leadership on climate policy.

In the last two weeks, the world has experienced extraordinary weather events in the Philippines, Vietnam and Somalia that have caused enormous human suffering. This is a further wake-up call for strong climate leadership. But at the United Nations climate negotiations in Warsaw, this leadership is lacking.

We look to Germany as a country that with its Energiewende has taken bold steps in the right direction. We applaud your success in rapidly developing renewable energy sources and your plans for increasing their share and energy efficiency further. Many countries around the world are inspired by this example. To ensure the Energiewende’s continued success and create a new dynamic at the international level, we urge you to set a strong and ambitious framework domestically and at the European Union level.

In March of next year, EU heads of state and government will decide on 2030 climate and energy targets. We expect you to support the necessary targets to ensure the EU makes a fair contribution to keeping temperature rise below 2°C while keeping 1.5°C within reach. **What is needed is an EU target of at least 55% domestic emissions reductions by 2030** below 1990 levels, combined with ambitious and binding renewable energy and energy consumption targets. A target of 40% would fall short of EU’s fair share of the global effort, and could in practice mean only 33% actual domestic emission cuts by 2030, due to the amount of surplus allowances in the system. An ambitious 2030 target should be the basis for the needed structural reform of the EU emissions trading scheme (ETS) and an adjusted climate target for 2020. Developed countries have agreed to take the lead until 2020 in the international efforts to combat climate change. The willingness to adopt strong EU targets for 2030, an increased target for 2020 and a reform of the ETS’ structure can be the urgently needed signals that bring new dynamic to this UN process. It would also show that you respect your moral obligation to the millions of people already suffering from devastating climate change in the Philippines and elsewhere.
Ambition can not only be measured in terms of climate targets. Climate finance plays a crucial role too on the way to a worldwide treaty which includes commitments of all countries with relevant emissions. We need a strong signal that Germany will increase budget expenditures for climate change adaptation and mitigation through to 2020 as promised in Copenhagen.

At the national level, a climate change act is needed that uses the climate and energy targets of the Energiewende as a framework for innovation. This decision could be a strong driver for success in the international process where 2014 is going to be "the year of ambition". It should be agreed in your coalition negotiations now and be presented at the Ministerial in June in Bonn where pre-2020 ambition will be the main issue. Such a climate change act would provide certainty to investors, enable a smooth transition domestically, and would build trust and credibility internationally. It shows to your partners that you take your targets seriously and that they will be achieved.

We need countries, which inspire the global transformation of our energy systems. Germany could and should do this. The world is watching you.

We have sent an identical letter to Sigmar Gabriel and Horst Seehofer.

Kind regards,

Representatives of the undersigned organizations

Global
1. ACT Alliance - Action of Churches Together
2. ActionAid International
3. BirdLife International
4. CARE International
5. Cetacean Society International
